

Reddy Akshay Kumar

Hyderabad | akshaykumarreddy1155@gmail.com | +91 8688162268 | website | LinkedIn | GitHub

Professional Summary

- Cloud and DevOps Engineer with 3+ years of experience designing, automating, and managing scalable and secure multi-cloud infrastructure.
- Expertise in Infrastructure as Code, container orchestration and CI/CD pipeline development.
- Proven ability to reduce infrastructure costs by up to 60% through serverless architecture and slash environment provisioning times by 90% via comprehensive automation.

Technical Skills

Cloud Platforms: AWS, GCP, Azure

Programming: Python, Java, Springboot

Operating Systems: Linux

Version Control: Git, Github

IaC & Automation: Terraform, AWS CDK, Boto3

CI/CD Tools: Jenkins, Gitlab CI

Containerization & Orchestration: Docker, Kubernetes (K8s), Helm, Rancher

Security: SonarQube, Trivy, HashiCorp Vault

Monitoring & Observability: Grafana, Prometheus, ELK Stack (Elasticsearch, Logstash, Kibana)

Professional Experience

DevOps Engineer, Particle41 – Remote Feb 2026 – Present

- Developed 10+ reusable **Terraform modules** to standardize and accelerate infrastructure provisioning across multi-tenant GCP environments, reducing code duplication by 40% and improving maintainability across teams.
- Automated end-to-end infrastructure provisioning for 15+ GCP services — including Cloud Run, API Gateway, Cloud Storage, Firebase Hosting, Artifact Registry, VPC Networking, Cloud Scheduler, Service Accounts, and Firestore — cutting manual provisioning time by 60% and enabling consistent deployments across a multi-tenant client architecture.
- Designed and maintained CI/CD pipelines for Terraform workflows using **GitHub Actions**, automating plan, validate, and apply stages — reducing infrastructure deployment time by 50% and eliminating manual errors in production rollouts.

DevOps Engineer, Sify Technologies Limited – Hyderabad July 2023 – Feb 2026

- Engineered and deployed a highly available, multi-cloud infrastructure on **AWS** and **GCP**, achieving 99.95% uptime while supporting a 40% year-over-year growth in application traffic.
- Architected a robust security framework utilizing AWS **IAM** roles, GCP Cloud IAM, and VPC service controls, which resulted in zero critical security incidents over a 24-month period and passed all compliance audits.
- Authored and maintained a library of over 50 reusable **Terraform** modules for both AWS and GCP, establishing a standardized IaC practice that accelerated new environment provisioning time by over 90%.
- Engineered a secure and collaborative Terraform workflow using AWS S3 for remote state and DynamoDB for state locking, enabling a team of 10+ engineers to manage infrastructure code concurrently without conflicts.
- Collaborated with development teams to design and manage end-to-end **CI/CD pipelines** using Jenkins, GitLab CI, and Google Cloud Build, increasing deployment frequency by 4x while maintaining a 99.8% success rate.
- Provisioned and managed 5+ **production-grade Kubernetes clusters** (GKE and EKS), including complex configurations with both CPU and GPU-accelerated node pools to support machine learning workloads.
- Led the containerization of 10+ legacy monolithic applications using Docker, improving application portability and reducing environment-specific deployment failures by 100%.
- Developed and maintained a repository of 15+ reusable **Helm** charts, standardizing the deployment process for

microservices on Kubernetes and reducing new service onboarding time from days to hours.

- Architected a fully **serverless** data processing pipeline on GCP using Cloud Functions, Pub/Sub, and Cloud Run, reducing monthly infrastructure costs by 60% compared to the previous VM-based solution.
- Developed Python-based serverless automation workflows with AWS Lambda and EventBridge to automate security patching and compliance reporting, cutting the manual operational workload by approximately 15 hours per week.

DevOps Intern, Sify Technologies Limited – Hyderabad

March 2023 – June 2023

- Architected and developed a custom, hardened Linux OS for secure examination servers, implementing PXE boot capabilities that allowed for the rapid, on-demand deployment of 100+ secure client systems.
- Implemented a real-time monitoring and observability stack using Prometheus and Grafana, which improved incident detection time by 75% and provided key performance metrics that contributed to a 10% increase in overall system uptime.

Certifications

- Google Cloud Certified – Professional Cloud DevOps Engineer
- AWS Certified Developer – Associate
- HashiCorp Certified: Terraform Associate

Education

SRKR Engineering College, B.Tech. in Computer Science - CGPA: 7.5

July 2019 – April 2023

Sri Chaitanya Junior College, XII standard - CGPA: 10

July 2017 – April 2019

Abhyudaya High School, Bobbili, X standard - CGPA: 9.5

April 2017
